

# IBERDROLA RENEWABLES

# factsheet

Iberdrola Renewables is the worldwide leader in wind power. With experience in 23 countries and a strategic plan to dramatically expand their portfolio of clean energy supply, the company is uniquely positioned to develop, build and operate energy projects around the world and in your community.

With over 9,300 MW of renewable energy in operation globally, and more than 2,800 MW of that wind power located in the US, Iberdrola Renewables is currently the world's leading provider of wind power. The company is a proven economic engine, directly and indirectly creating 15,000 jobs worldwide in 2008 and investing \$2.2 billion in wind power in the US in 2008, compared to \$1.54 billion in 2007. The company has built its strong position with renewable assets and concentrated growth in the US and Western Europe, becoming the 2nd largest provider of wind power in the US since entering the market in 2006.

Iberdrola Renewables, Inc. enjoys the financial backing of an ultimate international corporate parent, Iberdrola, S.A., Spain's number one energy group and the fourth largest utility company in world by Market Cap, with 33,000 people in more than 40 countries and a 107 year history with roots in hydroelectric. Iberdrola Renewables' parent, Iberdrola Renovables, has the largest renewable asset base and pipeline in the world – over 55,000 MW – 41% of which is located in the US. The company is also focused on developing the next generation of renewable technologies, including offshore wind, solar, biomass and tidal energy.

Iberdrola Renewables wind power projects are part of communities in 13 states, with many more going into construction all the time. The wind energy production from the US assets alone meets the electricity demand of 840,000 typical American homes each year with clean, homegrown electricity.

The North American division of Iberdrola Renewables also operates more than 636 MW of gas-fired generation and more than 155 BCF of owned and contracted gas storage, making the company one of the few organizations with the capabilities, focus, credit, and willingness to provide a wide range of structured energy solutions.

Iberdrola Renewables is a leader in optimized energy solutions tailored to meet the needs of large commercial and industrial customers, and a carbon offset provider for individuals and families. The company's portfolio of gas and power assets, gas storage facilities, and scheduling capabilities allow for the delivery of products and services that help customers manage risks and uncertainty in the natural gas and power industries. Iberdrola Renewables is supported by Iberdrola, S.A., one of the four biggest electricity companies in the world, which has placed the environment and sustainable development at the center of its strategic plans.
